## Turbo: Fast. Reliable. Durable.

Premium-class, chrome-plated spinning rings, exclusively from R+F:

Manufactured from high-quality, through hardened 100Cr6 steel, these rings are hard-chrome-plated in the company's own state-of-the-art coating facility and receive an additional end finish. The Turbo ring can be used flexibly and offers maximum productivity, maximum yarn quality and maximum lifetime.

The special characteristic is the accuracy of details with absolutely minimal ring profile and coating tolerances. The distinctive R+F hard-chrome surface combines optimal lubrication adhesion with extremely low wear, resulting in extreme longevity even when subjected to very high spindle speeds. The high-speed Turbo ring sets the benchmark for yarn quality – and can be used for all yarn qualities, including compact yarns.

### 360° R+F Performance

Performance line Turbo  
vs. comparable products

Variants of the rings are: Flange 1/2, 1 and 2 with different profiles, as BEF-, A or Varius-ring with or without centering plate.

Contact your R+F representative for further information and technical specifications or any R+F innovations.
